Workshop Description:

Prescription drug abuse (often referred to as the "Silent Epidemic") has been identified as a major drug problem in the US. In Florida, 11 people daily died from prescription drug abuse in 2008. In addition, Florida has the highest rate of prescription drug abuse, and is the major distribution center of OxycodoneTM for the remainder of the country.

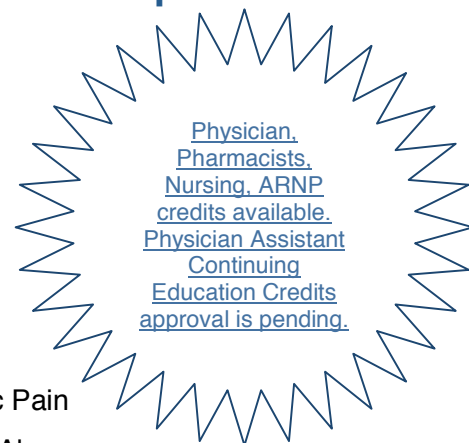

Recent legislation (SB 462) was passed in Florida to help combat this epidemic. The Prescription Drug Validation Bill creates a prescription drug-monitoring database which, in other states has shown to reduce the problem of diversion. In addition, the law empowers the Florida Board of Medicine to regulate and control pain clinics throughout the state. The Board of Medicine has recently signaled that it plans to include mandatory CME's for physicians in controlled substance prescribing for chronic pain.

"Pain Medicine and Controlled Substances: Risk Management and Best Practices" is a novel CME event, endorsed by the Florida Society of Interventional Pain Physicians that will offer healthcare providers the needed pain management medical education, legal and DEA updates, as well as compliance and risk management strategies that will keep them in the forefront of their specialty. The diseases of Pain and Addiction will be discussed and all participants will be provided a practice risk management protocol for the assessment and management of patients who receive controlled substances for pain.

AGENDA ON NEXT PAGE

"Pain Medicine and Controlled Substances: Risk Management and Best Practices" 2010 Workshops- Florida Agenda

7:00-7:35 am	Registration
7:35-7:45 am	Introduction
7:45-8:30 am	Fundamentals of Pain and Addiction
